

WHAT IS CLAIMED IS:

1. An electronic apparatus characterized by comprising a soft encasing body, and a soft electronic component provided in the encasing body.
- 5 2. The electronic apparatus according to claim 1, characterized by comprising:
  - a speaker having flexibility; and
  - a signal processing section having flexibility.
- 10 3. The electronic apparatus according to claim 2, characterized in that:
  - the signal processing section is provided on a sheet-shaped circuit board having flexibility; and
  - 15 the circuit board is rolled so as to have a hollow section and mounted in the encasing body.
4. The electronic apparatus according to claim 2, characterized in that:
  - 20 the signal processing section is configured to have an organic semiconductor element.
5. The electronic apparatus according to claim 2, characterized in that:
  - 25 the signal processing section has a wireless communication function.
6. The electronic apparatus according to claim 5, characterized in that:
  - 30 the signal processing section has a information storage section; and

the information storage section stores an information signal that is obtained by use of the wireless communication function.

5 7. The electronic apparatus according to claim 1, characterized wherein the electronic component includes a sheet-shaped polymer battery.

8. The electronic apparatus according to claim 7,  
10 characterized wherein the sheet-shaped polymer battery is rolled so as to have a hollow section and mounted in the encasing body.

9. The electronic apparatus according to claim 1,  
15 characterized in that:

the electronic component is controllable by a remote controller.

10. An electronic apparatus characterized by comprising:  
20 a soft encasing body;  
a soft electronic component provided in the encasing body; and  
a soft display section disposed on a surface of the encasing body.

25

11. The electronic apparatus according to claim 10, characterized in that:

the display section is configured to have a display device formed on a sheet having flexibility.

30

12. The electronic apparatus according to claim 10,

characterized by comprising:

a speaker having flexibility; and

a signal processing section having flexibility.

5 13. The electronic apparatus according to claim 12,  
characterized in that:

the signal processing section is provided on a  
sheet-shaped circuit board having flexibility; and

10 the circuit board is rolled so as to have a hollow  
section and mounted in the encasing body.

14. The electronic apparatus according to claim 12,  
characterized in that:

15 the signal processing section is configured to have an  
organic semiconductor element.

15. The electronic apparatus according to claim 12,  
characterized in that:

20 the signal processing section has a wireless  
communication function.

16. The electronic apparatus according to claim 15,  
characterized in that:

25 the signal processing section has a information storage  
section; and

the information storage section stores an information  
signal that is obtained by use of the wireless communication  
function.

30 17. The electronic apparatus according to claim 10,  
characterized in that:

the electronic component includes a sheet-shaped polymer battery.

18. The electronic apparatus according to claim 17,  
5 characterized in that:

the sheet-shaped polymer battery is rolled so as to have a hollow section and mounted in the encasing body.

19. The electronic apparatus according to claim 10,  
10 characterized in that:

the electronic component is controllable by a remote controller.
